HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

Pertinent Art Cited

The following US Patent Applications reveal the current state of the art:

Freud et al. (US 5,650,571) teach of a flow measuring device for determining and/or monitoring the volume, and/or mass, flow rate of a medium flowing through a containment in a streaming direction (fig. 1), comprising:

at least one ultrasonic transducer (16 or 18), which emits and/or receives ultrasonic measuring signals (column 7, lines 6-13); and

a control/evaluation unit (38), which determines the volume, and/or mass, flow rate of the medium in the containment on the basis of the ultrasonic measuring signals according to the travel-time-difference principle (column 4, lines 50-61; and column 12, lines 31-37), wherein:

associated with said control/evaluation unit (38) is at least one component of high power uptake (column 7, lines 17-21);

said control/evaluation unit (38) is embodied such that said at least one component of high power uptake is operated in a measuring phase and in an idle phase (on and off; column 7, lines 17-22).

However, Freud does not teach at least wherein said at least one component is activated in the measuring phase, while said at least one component has a reduced power uptake, or is turned off, in the idle phase; and the time span between two successive measuring, or idle, phases of said at least one component of high power uptake and/or the duration of a measuring phase (t_2) and/or the duration of an idle phase (t_1) of said at least one component of high power uptake is/are predetermined.

Allowable Subject Matter

Claims 13-17 and 22-26 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

The primary reason for the allowance of claim 23 is the inclusion of the limitation “wherein said at least one component is activated in the measuring phase, while said at least one component has a reduced power uptake, or is turned off, in the idle phase; and the time span between two successive measuring, or idle, phases of said at least one component of high power uptake and/or the duration of a measuring phase (t_2) and/or the duration of an idle phase (t_1) of said at least one component of high power uptake is/are predetermined”.

The primary reason for the allowance of claim 24 is the inclusion of the limitation “wherein said at least one component is activated in the measuring phase, while said at least one component has a reduced power uptake, or is turned off, in the idle phase; and an input unit, via which the time span between two successive measuring, or idle, phases of said at least one component of high power take up and/or the duration of a measuring phase (t_2) and/or the duration of an idle phase (t_1) of said at least one component of high power take up is predeterminable”.

The primary reason for the allowance of claim 25 is the inclusion of the limitation “wherein said at least one component is activated in the measuring phase, while said at least one component has a reduced power uptake, or is turned off, in the idle phase; and said control/evaluation unit determines the travel time of the measuring signals on the basis of predetermined system and/or process variables and specifies the time span between two successive measuring, or idle, phases of said at least one component of high power take up and/or the duration of a measuring phase (t_2) and/or the duration of an idle phase (t_1) of said at least one component of high power take up, as a function of the determined travel time”.

The primary reason for the allowance of claim 26 is the inclusion of the limitation “wherein said at least one component is activated in the measuring phase, while said at least one component has a reduced power uptake, or is turned off, in the idle phase; and said control/evaluation unit determines the travel time of the measuring signals on the basis of predetermined system and/or process variables, and said control/evaluation unit predetermines the time span between two successive measuring, or idle, phases of said at least one component of high power take up and/or the duration of a measuring phase (t_2) and/or the

Art Unit: 2863

duration of an idle phase (t_1) of said at least one component of high power takeup, as a function of the determined travel time and as a function of the energy which is available”.

The prior art of record, taken alone or in combination, fails to disclose or render obvious.

Claims 13-17 and 22 are allowed due to their dependency on claim 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
